

# MINDS THAT MATTER

Los Alamos National Laboratory, a multidisciplinary research institution engaged in strategic science on behalf of national security, seeks mid-career scientists for R&D positions in our Earth and Environmental Sciences Division.

The mission of the Earth and Environmental Sciences (EES) Division is to solve complex problems of national importance in environment, energy, and national security using our capabilities in earth and environmental sciences. The Division is a multi-program research organization with an overall staff of approximately 240. The core disciplines of EES Division include Geology, Geochemistry, Geophysics, Geomaterials, Geography, Hydrology, Atmospheric Science, Ecology, Environmental Science, Computational Science and Geotechnical Engineering. Capabilities in the Division are organized into groups, which consist of scientists, post-docs, technicians, administrators, and students. Most programs within the Division feature multi-discipline teams organized to solve complex problems of national importance.

**Computational Earth Scientist** - Geomechanics, IRC #19552

**Computational Earth Scientist** - Subsurface Flow and Transport Modeling, IRC #18152

**Computational Earth Scientist** - Atmospheric Phenomenology, IRC #18512

**Geochemists** - IRC #19613

**Geophysicist** - IRC #19512

**To apply, visit <https://jobs.lanl.gov> or visit <http://careers.lanl.gov> and enter desired job title in keyword field, referencing IRC #.**
