

**Cary Institute**  
of Ecosystem Studies

## **Postdoctoral Position**

### **Forest Biogeochemistry**

We are seeking a postdoctoral associate to work on a new NSF-funded project concerning the exchange of nitrogen between the soil and growing vegetation over the course of ecosystem succession. We need a postdoc interested in terrestrial biogeochemistry, forest soils, and use of stable isotopes of C and N. The field work will take place at the Hubbard Brook Experimental Forest in New Hampshire. The position will begin around February 1, 2014.
