## Hiring Meteorologist ASAP

### About Us

TerrAvion is the largest volume provider of aerial imagery to farms in the US. Each week or month, we map more than 100 times as much area as the whole electric drone industry combined. We are able to do this because we have the best model, the best technology, and the best team for delivering imagery to growers. Our company is highly interdisciplinary, fast-paced, and focused on solving real problems for farmers.

Our work is changing the world for the better, especially for the people who grow our food and wine. We have a culture of responsibility, accountability, and excellence. We take these values seriously with respect to one another, our customers, and partners, though we try not to take ourselves too seriously. We strive to be a place where team members can perform their best.

### What We're Looking For

We route a fleet of 30+ aircraft every day around weather to capture data. We need someone who would be interested in working with pilots to better navigate weather patterns and capture optimal imagery in optimal lighting conditions.

We want someone who likes working with weather, people, and is ready to tackle hard problems.

### Qualifications

- Works well with teams
- Bachelor's degree in Meteorology or related field
- Aviation experience (nice to have)
- A can do attitude!

### If Interested

Send your resume to [stephen@terravion.com](mailto:stephen@terravion.com).
