

Postdoctoral Fellowship Opportunities 2020

ANNAPOLIS, MD

SESYNC invites applications from early career scholars (\leq four years post PhD) for two-year postdoctoral fellowships that begin June 2020. Applicants may propose a project that is: 1) primarily ecological/environmental, 2) primarily socially focused but environmentally-related; or 3) a combination.

Each fellow works with a Collaborating Mentor of their choosing that extends the fellow's current network of collaborators; the mentor may be affiliated with any organization or institution. Fellows are in residence at SESYNC full time and will join a vibrant community of postdocs from a broad range of disciplines. Travel funds to interact with their mentor and attend conferences are provided.

Successful candidates will use synthesis methods to address a problem arising from, or associated with, the relationship between humans and the environment. Projects should have the potential to advance understanding of socio-environmental systems, but the information synthesized may be primarily social or environmental in nature, or some mix.

SESYNC's Postdoc Immersion Program

Unique among environmental postdoctoral programs, SESYNC Postdoctoral Fellows participate in the S-E Immersion Program. The program is designed to advance their understanding of theories and methods foundational to research on S-E systems, and to enhance their ability to conduct interdisciplinary and actionable science.

The core of this experience is engagement with material and people from diverse disciplines that are relevant to research on socio-environmental systems. This takes the form of interactive workshops and lectures by visiting scholars.

Previous S-E Immersion Program topics include:

- Policy Sciences and Geography
- Interdisciplinary Team Science
 - Behavioral Economics
- Network Science and Ecology
