Chemist Vacancy

The U.S. Geological Survey's (USGS) Central Energy Resources Science Center (CERSC) in Lakewood, Colorado has a vacancy for a **CHEMIST** with demonstrated experience using a gas chromatograph interfaced with a mass spectrometer to analyze organic compounds in geologic samples.

Specific Duties Include:

- preparing samples for analysis
- conducting geochemical analyses of samples using a variety of instruments
 - processing, analyzing, and reporting data from analyses
 - maintaining required documentation

How to Apply:

This is a permanent, full-time position that will be filled at either the GS-09 (\$58,006–\$75,408) or GS-11 (\$70,181–\$91,234) levels, depending upon qualifications and experience. The application period is from 2/14/20 through 2/28/20, and will be limited to the first 100 applicants. For more information, and to apply for the job, please visit:

Applications for this vacancy must be received on-line via USAJOBS BEFORE midnight Eastern Time on 2/28/20. If you fail to submit a complete on-line application, you will not be considered for this position. Requests for extensions will not be granted. For assistance or questions, or if applying on-line poses a hardship to you, please contact Bukie Alimi (oalimi@usgs.gov) in the Office of Human Resources at 303-236-9597 prior to the closing date.

About CERSC:

The CERSC is part of the USGS Energy Resources Program which conducts research and assessments to advance the understanding of the Nation's energy resources. We study processes critical to the formation, accumulation, occurrence, and alteration of geologically based energy resources. We conduct undiscovered energy resource assessments and disseminate the results to the public and policy makers at all levels of government. We also evaluate the environmental and socioeconomic effects of energy resource occurrence, production, and use.

U.S. Citizenship is required. The Federal Government is an equal opportunity employer.
