Chemist Vacancy

The U.S. Geological Survey's (USGS) Central Energy Resources Science Center in Lakewood, Colorado (a west-Denver suburb) has a vacancy for a Chemist with demonstrated experience at using a gas chromatograph interfaced with a mass spectrometer to analyze organic compounds in geologic samples. This is a permanent, full-time position that will be filled at either the GS-09 or GS-11 levels. The application period is from 2/14/20 through 2/28/20, and will be limited to the first 100 applicants.

Specific Duties Include:

- preparing samples for analysis
- conducting geochemical analyses of samples using a variety of instruments
 - processing, analyzing, and reporting data from analyses
 - maintaining required documentation

About Us:

The Central Energy Resources Science Center is part of the USGS Energy Resources Program which conducts research and assessments to advance the understanding of the Nation's energy resources. We study processes critical to the formation, accumulation, occurrence, and alteration of geologically based energy resources. We conduct undiscovered energy resource assessments and disseminate the results to the public and policy makers at all levels of government. We also evaluate the environmental and socio-economic effects of energy resource occurrence, production, and use.

The Federal Government is an equal opportunity employer.
