Hurricane Forecasts: Communicating Risks to Communities

Hurricane forecasts have improved significantly, but accurately predicting where and when a hurricane will make landfall remains a challenge. Even more challenging is communicating the potential for high winds, flooding, and associated impacts in different regions with enough warning to evacuate coastal residents. Dr. Morss will discuss the successes and challenges of hurricane forecasting and risk communication, including major events of the devastating 2017 hurricane season.

Dr. Rebecca Morss,
NCAR
